

THE SPECIFICATION INTERNET

Commerce should begin with human intent.

Not product catalogues. Briefly transforms what people want into standardized manufacturing specifications.

Transforming human intent into standardized manufacturing specifications.

THE HIDDEN PROBLEM

Commerce begins with products. People do not.

Customers

- Cannot find exactly what they need
- Compromise on design or functionality
- Contact multiple manufacturers
- Repeatedly explain requirements
- Wait days for quotations

Manufacturers

- Receive vague enquiries
- Spend hours clarifying requirements
- Educate customers on materials and constraints
- Prepare quotations that never convert

The real bottleneck is not manufacturing. It is translating human intent into something manufacturers can actually build.

THE PIVOT

We thought we were solving the wrong problem.

Initial assumption

Find manufacturers

Marketplace MVP

5 interviews

Real bottleneck

What manufacturers told us

- ✓ Customers do not know what manufacturers need
- ✓ Clarification wastes time
- ✓ Budgets and materials are misunderstood
- ✓ Standardized specs reduce quotation effort

"It turns an ambiguous design conversation into a deterministic procurement transaction."

Teck Soon Furniture

INTRODUCING THE SPECIFICATION INTERNET

We remove ambiguity before manufacturing begins.

Instead of

Customer

Search products

Compromise

Purchase

We propose

Customer intent

AI specification copilot

Specification packet

Multiple manufacturers

We do not replace manufacturers. We help customers arrive with quote-ready requirements.

THE AI SPECIFICATION COPILOT

From a sentence to a manufacturable packet.

Customer intent

"I need a walnut study desk under my staircase."

AI clarifies

- ✓ Dimensions
- ✓ Budget
- ✓ Materials
- ✓ Doorway access
- ✓ Cable management
- ✓ Child-safe needs

AI generates

- Material recommendations
- Cost estimate
- Lead time estimate
- Manufacturability checks
- Simple 3D preview
- Specification packet

Funding step change

Current MVP

- ✓ Requirement collection
- ✓ Manufacturer discovery
- ✓ Quotation workflow

Next phase

- AI clarification engine
- Specification packet
- Material recommendation
- Cost estimation
- 3D preview

OUR MVP

Build. Validate. Improve.

Current MVP

- ✓ Browse custom furniture
- ✓ Submit requirements
- ✓ Receive quotations
- ✓ Compare manufacturers
- ✓ Place order

Why we started here

- Validate the workflow first
- Learn from real users
- Avoid unnecessary features
- Prove demand before scaling

Validate first. Build second. Scale third.

PROTOTYPE WALKTHROUGH

What the current prototype proves.

Account-gated workflow

- ✓ Briefs, vendor details, saved addresses, and payments stay tied to a user.
- ✓ Buyer and vendor journeys can split from sign up.

Next prototype depth

- Show brief creation
- Show vendor bid selection
- Show payment and order status

BUILT. TESTED. PIVOTED.

We challenged our assumptions.

User feedback	Product improvement	Strategic result
Customers struggle to explain requirements	AI clarification workflow	Less vague demand
Manufacturers ask repetitive questions	Specification packet	Faster quotation
Specifications are inconsistent	Universal structured format	Comparable bids
MVP too broad	Focus on custom wooden furniture	Sharper validation

MARKET VALIDATION

Validated by customers and manufacturers.

Customer survey signal

- 45 responses surfaced repeated search, design, and quotation friction
- 44.4% could not find the right material
- 44.4% could not find the right design
- 37.8% were frustrated searching across many websites
- 31.1% were frustrated waiting for quotations

Manufacturer validation

- ✓ 5/5 reported missing specifications
- ✓ 5/5 spend significant time clarifying
- ✓ 5/5 said standardized specs reduce effort
- ✓ 4/5 interested in piloting

84.6%

checked more than 10 suppliers, stores, or websites before deciding

54.9%

rated the AI workflow 5 out of 5 for value

60.8%

rated the AI workflow 4 or 5, showing strong early pull

SURVEY EVIDENCE

Search creates fatigue before a brief is even made.

Which parts felt frustrating?

**44.4%****could not find the right material or design**

- The problem is not only finding a supplier. Customers struggle to define what they actually need.

37.8%**searched across many websites**

- This validates Briefly's intent-first flow: reduce browsing before the customer knows their exact specification.

Supplier-search load

SURVEY EVIDENCE

The AI workflow has pull, but trust still matters.

Plain-English AI specification flow

Imagine you could simply describe the custom product you want in plain English (e.g., "I need a walnut desk with hidden cable management that fits under my staircase").

[Copy chart](#)

An AI would then:

- Generate detailed product specifications
- Recommend suitable materials
- Estimate the manufacturing cost
- Create a simple 3D preview
- Obtain quotations from multiple manufacturers

How valuable would this be to you?

51 responses

54.9% rated the AI workflow 5/5

- A majority saw strong value in turning plain English into specifications, materials, cost estimates, previews, and quotations.

15.6% struggled with materials and quotation comparison

- The same pain points map directly to AI material recommendations and standardized bid comparison.

Custom maker difficulty

If you contacted a custom furniture maker, what was the most difficult part?

[Copy chart](#)

45 responses

WHY EXISTING SOLUTIONS FALL SHORT

Existing platforms help people find products. We help people define what they need.

	Existing solutions	The Specification Internet
Starting point	Products	Human intent
Workflow	Search and compromise	AI clarification
Specifications	Manual	Standardized
Quotations	One manufacturer	Competitive bidding
Innovation	Marketplace	Specification engine

MARKET OPPORTUNITY

A focused wedge into custom manufacturing.

Phase 1

Singapore custom wooden furniture

Phase 2

- Wardrobes
- Kitchen cabinets
- Office furniture
- Retail displays

Phase 3

- Commercial fit-out
- Renovation
- Custom manufacturing

TAM

Global custom manufacturing

SAM

Singapore custom furniture

SOM

500 users, 100 specs, 30 projects

Long-term vision: a universal specification layer connecting customers and manufacturers worldwide.

BUSINESS MODEL

Manufacturers pay when we create real business.

Today: marketplace commission

Small commission on successfully completed projects.

Enterprise API

Integrate the Specification Engine into manufacturing software.

Future: manufacturer SaaS

- AI quotation assistant
- Specification management
- Workflow automation

Premium AI tools

- Advanced design refinement
- Specification history
- Enhanced 3D previews

ROADMAP

From MVP to public beta.

Already achieved**Marketplace MVP,
survey, interviews, pivot****0-3 months****AI clarification engine****4-6 months****Spec packet and material
recommendation****7-9 months****Pilot with 5-10
manufacturers****10-12 months****Public beta launch****500****users****100****specifications****30****completed projects****5-10****manufacturer partners**

ABOUT US

Meet the team building Briefly.

CEO

Mohamed Sirajudeen Bin Mohamed Rabik

Siraj leads product direction, customer discovery, and the overall Briefly vision.

CFO

Thanis Senthilkumas

Thanis owns finance, business modelling, and validation of the commercial strategy.

CTO

Sherwin Rufus

Sherwin drives engineering, technical execution, and the AI specification roadmap.

WHY WE ARE THE RIGHT TEAM

We started with a marketplace. Evidence changed the product.

Technical

- Full-stack development
- AI integration
- Product engineering

Business

- Customer discovery
- Validation
- Partnerships

Design

- UX/UI
- Prototyping
- User experience

Instead of defending our original idea, we changed it. Evidence of execution: working MVP, customer survey, manufacturer interviews, product pivot, AI roadmap, live demo.

THE FUTURE OF COMMERCE

Products built exactly as needed.

Today

Products

Customers compromise

Tomorrow

Human intent

AI spec copilot

Standardized specification

Manufacturers

The internet standardized how information moves. Manufacturing needs a standardized specification layer so products begin with human intent, not product catalogues.

We are not building a better marketplace. We are building the missing layer between imagination and manufacturing.
